

Inhibiting the unchecked growth of microbes, that quickly multiply in moist conditions, can be of critical importance in contemporary society as these bacteria, and fungi can lead to adverse health effects.

These anti-microbial properties become of prime importance for people who are continuously exposed to a variety of pathogens, like medical personnel or those going on long excursions in the wild.

Odour free clothes are built on the principle that at the helm of the odour emanating from clothes, is microbial build-up. RSWM EDGE™ Fresh yarns lead to a variety of textiles from doctor's gowns to gym clothes, socks or even formals, that do not smell unpleasant or propagate bacteria.

RSWM EDGE™ Fresh yarns integrate elements like coffee or silver fibres consolidating comfort and breathability of spun yarns with odour capture, antimicrobial or odour elimination technologies.

RSWM EDGE™ Fresh yarns have the capability to eliminate bacteria right down to the core of garments and unlike any surface finish, the properties offered are permanent and last to the garment's life.

“No more unpleasant odours with RSWM EDGE™ Fresh by incorporating odour capture, anti-microbial technologies to inhibit microbial buildup.”

Size of hang tag:
1.45" X 3.74"

Rules of acquiring tags:

5 HT/kg for garments that contain at least 50% RSWM EDGE™ Fresh yarn.

RSWM EDGE™ Fresh yarn range

Fresh_x76167 | Fresh_aw10300005 | Fresh_aw10400025 | Fresh_x832670

*Final decision of issuing the hang tag lies with RSWM Ltd. The garments need to confer with certain standards specified and the values indicated are only an estimate and the product will be tested to determine the tag's features.
